

Cisco Security Deployment Services for Firepower

Deploying Cisco Firepower Right the First Time

With a sophisticated arsenal of advanced security capabilities and features, the Cisco Firepower™ solution protects your critical assets, data, and stakeholders. Deploying this solution in a way that takes your organization's risk tolerance, culture, and unique environment into account requires skill and expertise. Many organizations don't have these capabilities and fail to deploy the solution accurately and effectively. This leaves them achieving only a portion of the solution's full value. Worse yet, they often have a false sense of security when things are not deployed correctly to provide the greatest protection.

Cisco's Security Deployment Services for Firepower help our customers ensure they are enjoying all of the benefits of the Cisco Firepower solution by validating the solution design, deploying it correctly, and configuring and tuning it in as little as 45 days. Our subject matter experts work closely with your team to help ensure that your deployment reduces risk, satisfies compliance requirements, and makes security operations more efficient.

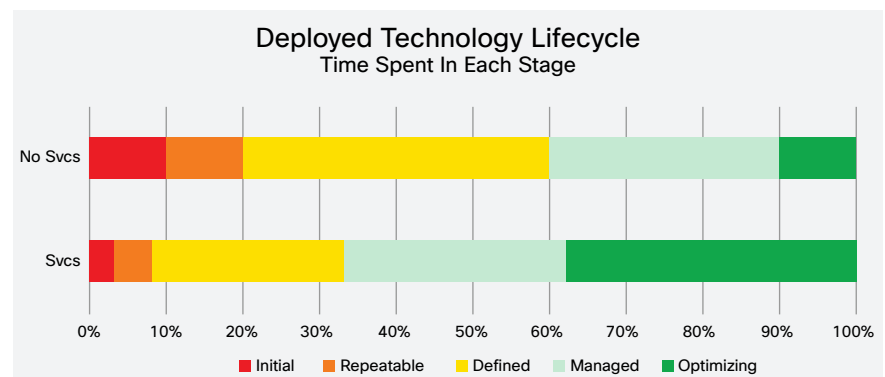

Using Cisco's proven deployment methodologies, our services team relies on a results-driven approach to deploy solutions that may include one or more of the following platforms:

- Cisco ASA with FirePOWER™ Services, the industry's first threat-focused next-generation firewall (NGFW) that integrates proven Cisco ASA firewalling with Cisco Firepower intrusion detection and prevention technologies
- Cisco Firepower physical and virtual appliances, our proven, industry-leading intrusion detection and prevention technologies

Benefits

- Establishes quick, effective, and comprehensive deployment of the Cisco Firepower solution
- Uses proven methodologies to obtain high deployment value and avoid costly mistakes
- Improves time to value and lowers cost of ownership
- Frees IT resources to focus on core business initiatives
- Provides knowledge transfer to help train staff on operating and using the solution
- Meets audit requirements with best practices based on regulatory, industry, and governance frameworks
- Makes services procurement easier and services costs predictable
- Provides thought leadership in security and a services practice with well over 100 years of combined experience deploying Cisco Firepower solutions

“We couldn’t have been happier with the whole experience. I wish all companies that offer professional services took this approach.”

– Cisco customer

Proven Methodologies Deliver Results

Our methodologies cover Pre-Deployment, Deployment, and Post-Deployment phases. The service provides detailed planning, careful change management, tuning of the solution, and a final deployment summary report. Our skilled team of professionals helps ensure that Cisco Security Deployment Services for Firepower deliver a smooth, results-driven deployment of Cisco’s industry-leading, comprehensive, advanced threat protection solution.
