## OVERVIEW

The Cisco® UCS C220 M4 SFF rack server is the newest 2-socket, 1U rack server from Cisco, designed for both performance and expandability over a wide range of storage-intensive infrastructure workloads from web serving to distributed database.

The enterprise-class UCS C220 M4 SFF server extends the capabilities of Cisco's Unified Computing System portfolio in a 1U form factor with the addition of the Intel Xeon E5-2600 v3 and v4 series processor family that deliver significant performance and efficiency gains. In addition, the UCS C220 M4 SFF server provides 24 DIMM slots, up to 8 drives and 2 x 1 GbE LAN-on-motherboard (LOM) ports delivering outstanding levels of density and performance in a compact 1U package.

The C220 M4 SFF server includes a modular LAN on motherboard (mLOM) slot for installation of a Cisco Virtual Interface Card (VIC) or third-party network interface card (NIC) without consuming a PCI slot in addition to 2 x 1 GbE embedded (on the motherboard). These features combine to provide outstanding levels of internal memory and storage expandability along with exceptional performance.

The Cisco UCS C220 M4 SFF server can be used standalone, or as part of the Cisco Unified Computing System, which unifies computing, networking, management, virtualization, and storage access into a single integrated architecture enabling end-to-end server visibility, management, and control in both bare metal and virtualized environments.

## BASE SERVER STANDARD CAPABILITIES and FEATURES

*Table 1* lists the capabilities and features of the base server. Details about how to configure the server for a particular feature or capability (for example, number of processors, disk drives, or amount of memory) are provided in *CONFIGURING the SERVER, page 14*.

Table 1 Capabilities and Features

Capability/Feature	Description
Chassis	One rack unit (1RU) chassis
CPU	One or two Intel® Xeon E5-2600 v3 or v4 series processor family CPUs
Chipset	Intel® C610 series chipset
Memory	24 slots for registered DIMMs (RDIMMs) or load-reduced DIMMs (LRDIMMs)
Multi-bit Error Protection	This server supports multi-bit error protection.
Embedded NIC	Two embedded (on the motherboard) Intel i350 GbE ports, supporting the following: <ul style="list-style-type: none"> <li>■ Pre-Execution Boot (PXE boot)</li> <li>■ iSCSI boot</li> <li>■ Checksum and segmentation offload</li> <li>■ NIC teaming</li> </ul>
Expansion slots	<ul style="list-style-type: none"> <li>■ Riser 1 (controlled by CPU 1): <ul style="list-style-type: none"> <li>• One full-height profile, 3/4-length slot with x24 connector and x16 lane</li> </ul> </li> <li>■ Riser 2 (controlled by CPU 2): <ul style="list-style-type: none"> <li>• One half-height profile, half-length slot with x24 connector and x16 lane, or</li> <li>• One half-height profile, half-length slot with x24 connector and x8 lane and two mini-SAS HD connectors that support two front-mount PCIe Gen 3 NVMe PCIe SSDs.</li> </ul> </li> <li>■ Dedicated RAID controller slot (see <a href="#">Figure 6 on page 65</a>) <ul style="list-style-type: none"> <li>• An internal slot is reserved for use by the Cisco 12G SAS Modular RAID controller or the Cisco 12 Gbps Modular SAS HBA.</li> </ul> </li> </ul>

Table 1 Capabilities and Features (*continued*)

Capability/Feature	Description
Internal storage devices	<p>Drives are installed into front-panel drive bays that provide hot-pluggable access.</p> <ul style="list-style-type: none"> <li>• Small Form Factor (SFF) drives. Up to eight 2.5-inch SAS or SATA hot-swappable hard disk drives (HDDs) or solid state drives (SSDs).</li> <li>• NVMe PCIe SSD drives. These drives can be placed in front drive bays 1 and 2 only.</li> </ul> <ul style="list-style-type: none"> <li>■ The server also contains one internal USB 3.0 port on the motherboard that you can use with an optional 16 GB USB thumb drive for additional storage</li> <li>■ UCS Storage Accelerators are also available. These PCIe flash storage devices provide independent high-speed storage.</li> </ul>
Cisco Flexible Flash drives	<p>The server supports up to two internal 32 GB or two internal 64 GB Cisco Flexible Flash drives (SD cards).</p> <p>The second SD card is blank and can be used to mirror the first SD card. It can be used to protect the Hypervisor Partition with RAID1.</p>
Video	<p>The Cisco Integrated Management Controller (CIMC) provides video using the Matrox G200e video/graphics controller:</p> <ul style="list-style-type: none"> <li>■ Integrated 2D graphics core with hardware acceleration</li> <li>■ DDR2/3 memory interface supports up to 512 MB of addressable memory (8 MB is allocated by default to video memory)</li> <li>■ Supports display resolutions up to 1920 x 1200 16bpp @ 60Hz</li> <li>■ High-speed integrated 24-bit RAMDAC</li> <li>■ Single lane PCI-Express host interface running at Gen 1 speed</li> </ul>

Capability/Feature	Description
Integrated management processor	Baseboard Management Controller (BMC) running Cisco Integrated Management Controller (CIMC) firmware. Depending on your CIMC settings, the CIMC can be accessed through the 1-GbE dedicated management port, the 1-GbE LOM ports, or a Cisco virtual interface card (VIC).

## CONFIGURING the SERVER

Follow these steps to configure the Cisco UCS C220 M4 High-Density SFF Rack Server:

- *STEP 1 VERIFY SERVER SKU, page 15*
- *STEP 2 SELECT CPU(s), page 16*
- *STEP 3 SELECT MEMORY, page 19*
- *STEP 4 SELECT RAID CONTROLLERS, page 25*
- *STEP 5 SELECT HARD DISK DRIVES (HDDs) or SOLID STATE DRIVES (SSDs), page 33*
- *STEP 6 SELECT PCIe OPTION CARD(s), page 37*
- *STEP 7 ORDER OPTIONAL NETWORK CARD ACCESSORIES, page 40*
- *STEP 8 ORDER POWER SUPPLY, page 45*
- *STEP 9 SELECT AC POWER CORD(s), page 46*
- *STEP 10 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM, page 49*
- *STEP 11 SELECT NIC MODE (OPTIONAL), page 50*
- *STEP 12 ORDER A TRUSTED PLATFORM MODULE (OPTIONAL), page 51*
- *STEP 13 ORDER CISCO FLEXIBLE FLASH SD CARD MODULE (OPTIONAL), page 52*
- *STEP 14 ORDER OPTIONAL USB 3.0 DRIVE, page 53*
- *STEP 15 SELECT OPERATING SYSTEM AND VALUE-ADDED SOFTWARE, page 54*
- *STEP 16 SELECT OPERATING SYSTEM MEDIA KIT, page 57*
- *STEP 17 SELECT SERVICE and SUPPORT LEVEL, page 58*
- *OPTIONAL STEP - ORDER RACK(s), page 63*
- *OPTIONAL STEP - ORDER PDU, page 64*

## STEP 1 VERIFY SERVER SKU

Verify the product ID (PID) of the server as shown in [Table 2](#).

Table 2 PID of the C220 M4 High-Density SFF Rack Base Server

Product ID (PID)	Description
UCSC-C220-M4S	UCS C220 M4 SFF, no CPU, memory, HDD, SSD, power supply, SD cards, PCIe cards, or tool-less rail kit

The Cisco UCS C220 M4 SFF server:

- Does not include power supply, CPU, memory, hard disk drives (HDDs), solid-state drives (SSDs), SD cards, tool-less rail kit, or plug-in PCIe cards.

**NOTE:** Use the steps on the following pages to configure the server with the components that you want to include.

## STEP 2 SELECT CPU(s)

The standard CPU features are:

- Intel Xeon E5-2600 v3 and v4 series processor family CPUs
- Intel C610 series chipset
- Cache size of up to 55 MB

### Select CPUs

The available CPUs are listed in [Table 3](#).

## Notes . . .

1. If higher or lower speed DIMMs are selected than what is shown in the table for a given CPU, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.
2. The E5-2609 v3 CPU does not support Intel Hyper-Threading or Intel Turbo Boost technologies.

## Approved Configurations

---

(1) 1-CPU configurations:

- Select any one CPU listed in [Table 3 on page 16](#).

(2) 2-CPU Configurations:

- Select two identical CPUs from any one of the rows of [Table 3 on page 16](#).

## Caveats

---

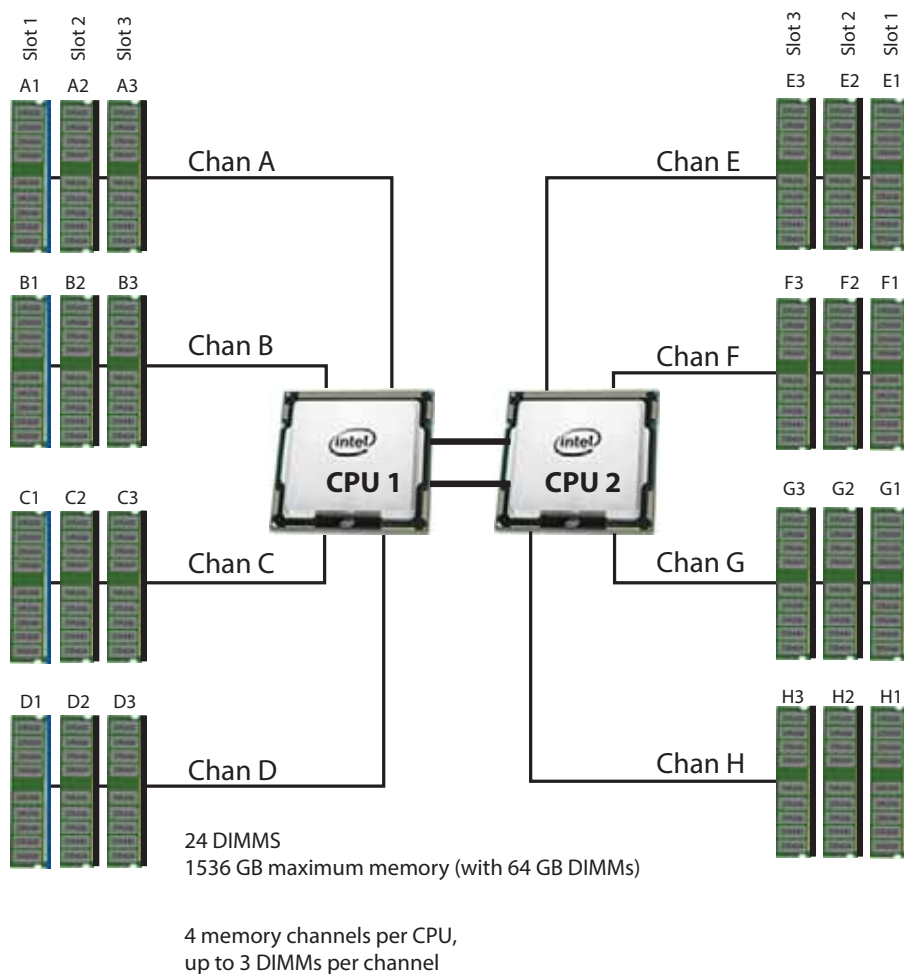

- You can select either one processor or two identical processors.
- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:
  - [STEP 3 SELECT MEMORY, page 19](#) (memory mirroring section)
  - [Table 9 on page 29](#) (RAID support table)
  - [STEP 4 SELECT RAID CONTROLLERS, page 25](#)
  - [STEP 6 SELECT PCIe OPTION CARD\(s\), page 37](#)
- For optimal performance, select DIMMs with the highest clock speed for a given processor (see [Table 3 on page 16](#)). If you select DIMMs whose speeds are lower or higher than that shown in the tables, suboptimal performance will result.

## STEP 3 SELECT MEMORY

The standard memory features are:

- DIMMs
  - Clock speed: 2400 or 2133 MHz
  - Ranks per DIMM: 1, 2, 4, or 8
  - Operational voltage: 1.2 V
  - Registered ECC DDR4 DIMMs (RDIMMs), TSV-RDIMMs, or load-reduced ECC DDR4 DIMMs (LRDIMMs)
- Memory is organized with four memory channels per CPU, with up to three DIMMs per channel, as shown in [Figure 4](#).

Figure 4 C220 M4 SFF Memory Organization

Select DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in [Table 4](#).

**NOTE:** When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

Notes . . .

- 1. Power capping is not supported when using 64GB TSV-RDIMMS.

Approved Configurations

(1) 1-CPU configuration without memory mirroring:

- Select from 1 to 12 DIMMs. Refer to [Memory Population Rules, page 68](#), for more detailed information.

(2) 1-CPU configuration with memory mirroring:

- Select 2, 4, 8, or 12 identical DIMMs. The DIMMs will be placed by the factory as shown in the following table.

Total Number of DIMMs	CPU 1 DIMM Placement in Channels (for identical dual-rank DIMMs for 3DPC or identical quad-rank DIMMs for 2DPC)		
	Blue Slots	Black Slots	White Slots
2	(A1, B1)	—	—
4	(A1,B1); (C1,D1)	—	—
8	(A1,B1); (C1,D1)	(A2,B2); (C2,D2)	—
12	(A1,B1); (C1,D1)	(A2,B2); (C2,D2)	(A3,B3); (C3,D3)

- Select the memory mirroring option (N01-MMIRROR) as shown in [Table 4 on page 20](#).

(3) 2-CPU configuration without memory mirroring:

- Select from 1 to 12 DIMMs per CPU. Refer to [Memory Population Rules, page 68](#), for more detailed information.

(4) 2-CPU configuration with memory mirroring:

- Select 2, 4, 8, or 12 identical DIMMs per CPU. The DIMMs will be placed by the factory as shown in the following table.

Number of DIMMs per CPU	CPU 1 DIMM Placement in Channels (for identical dual-rank DIMMs for 3DPC or identical quad-rank DIMMs for 2DPC)			CPU 2 DIMM Placement in Channels (for identical dual-rank DIMMs for 3DPC or identical quad-rank DIMMs for 2DPC)

Notes . . .

1. Not recommended (for performance reasons)

- Select the memory mirroring option (N01-MMIRROR) as shown in [Table 4 on page 20](#).

NOTE: System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.

Caveats

- System speed is dependent on how many DIMMs are populated per channel and the CPU DIMM speed support. See [Table 5](#) for details.

Notes . . .

1. Available at a future date

- The C220 M4 server supports four different memory reliability, availability, and serviceability (RAS) modes:
  - Independent Channel Mode
  - Mirrored Channel Mode
  - Lockstep Channel Mode
- Below are the system level RAS Mode combination limitations:
  - Mixing of Independent and Lockstep channel mode is not allowed per platform.
  - Mixing of Non-Mirrored and Mirrored mode is not allowed per platform.
  - Mixing of Lockstep and Mirrored mode is not allowed per platform.
- Do not mix RDIMMs with LRDIMMs
- Do not mix 64GB DDR4-2133-MHz TSV-RDIMMs with any other DIMMs
- Single-rank DIMMs can be mixed with dual-rank DIMMs in the same channel
- Do not mix quad-rank DIMMs with single- or dual-rank DIMMs in the same channel
- For best performance, observe the following:
  - DIMMs with different timing parameters can be installed on different slots within the same channel, but only timings that support the slowest DIMM will be applied to all.

As a consequence, faster DIMMs will be operated at timings supported by the slowest DIMM populated.

- When one DIMM is used, it must be populated in DIMM slot 1 (farthest away from the CPU) of a given channel.
- When single, dual or quad rank DIMMs are populated for 2DPC or 3DPC, always populate the higher number rank DIMM first (starting from the farthest slot). For a 3DPC example, first populate with quad-rank DIMMs in the DIMM slot 1. Then dual-rank DIMMs in the DIMM 2 slot. Then single-rank DIMMs in the DIMM 3 slot.
- DIMMs for CPU 1 and CPU 2 (when populated) must always be configured identically.
- When using mirroring, DIMMs must be installed in identical pairs across paired DDR4 buses. That is, mirrored pairs in channels A and B must be identical and pairs in channels C and D must be identical. However, the DIMMs used in channels A and B can be different from those in channels C and D.
- Memory mirroring reduces the amount of available memory by 50% (quantity of DIMMs must be even for mirroring).
- Non-ECC DIMMs are not supported.
- Cisco memory from previous generation servers (DDR3) is not compatible with this server

For more information regarding memory, see [CPUs and DIMMs, page 67](#).

## STEP 4 SELECT RAID CONTROLLERS

### RAID Controller Options (internal HDD/SSD support)

#### Embedded Software RAID

You can choose either the default embedded software RAID or the embedded software RAID 5 key upgrade.

- The default RAID configuration is embedded software RAID, which supports SATA HDDs (RAID 0, 1, 10).
- The embedded software RAID 5 key upgrade supports RAID 0, 1, 5, 10.

**NOTE:** The embedded software RAID in the Intel chipset hub is split into two, SATA and sSATA (secondary SATA). They are seen as separate software RAID controllers and are configurable separately. For more details, see *Embedded SATA RAID: Two SATA Controllers*, page 74.

#### Cisco 12G SAS Modular RAID Controller

You can choose the Cisco 12G SAS RAID controller, which plugs into a dedicated RAID controller card slot. This RAID controller supports RAID 0, 1, 10 (without the FBWC option) and supports up to RAID 0, 1, 10, 5, 6, 50, 60 (with the FBWC option).

**NOTE:** The number of RAID groups (virtual drives) supported per RAID controller is as follows:

- Embedded RAID = 8
- Cisco 12G SAS Modular RAID controller = 64

### SAS HBA (internal HDD/SSD/JBOD support)

Instead of a RAID controller, you can choose a SAS HBA for internal drive connectivity (non-RAID):

- Cisco 12 Gbps Modular SAS HBA, which plugs into a dedicated RAID controller slot.

### SAS HBA (external JBOD support)

In addition to a RAID controller or JBOD controller for internal drives, you can choose the following SAS HBA for external connectivity (non-RAID), which plugs into one of the PCIe slots:

- Cisco 9300-8e 12G SAS HBA (provides 8 SAS ports for external JBOD connectivity).

## RAID Volumes and Groups

When creating each RAID volume, follow these guidelines:

- Use the same capacity for each drive in each RAID volume
- For embedded software RAID or the embedded software RAID 5 key upgrade:
  - Use only SATA HDDs
  - Embedded software RAID has two ports and each port can control 4 drives, for 8 drives total.
  - Each set of 4 SATA HDDs for a port must be in separate RAID volumes.
  - You cannot mix drives across ports to create a RAID volume.
  - For more details, see [Embedded SATA RAID: Two SATA Controllers, page 74](#).
- For the Cisco 12G SAS modular RAID controller upgrade:
  - Use either all SAS HDDs, all SAS SSDs, or all SATA SSDs in each RAID volume

The number of RAID groups (virtual drives) supported per RAID controller is as follows:

- Embedded RAID = 8
- Cisco 12G SAS Modular RAID controller = 64

### Select Controller Options

---

Select one of the following:

- Embedded software RAID (this is the default if no other selection is made), or
- Embedded software RAID 5 key upgrade option for internal drives (see [Table 7 on page 27](#)), or
- One Cisco 12G SAS modular RAID controller or Cisco 12 Gbps Modular SAS HBA (see [Table 8 on page 27](#)), or
- Dual controllers:
  - One Cisco 12G SAS modular RAID controller or one Cisco 12 Gbps Modular SAS HBA and
  - One Cisco 9300-8E 12G SAS HBA for external SAS JBOD/enclosure connectivity support (see [Table 8 on page 27](#)).

**NOTE:** Mixing the Cisco 9300-8e HBA in the same server as the Cisco 12 Gbps Modular SAS HBA requires the following firmware levels:

- Cisco IMC/BIOS 2.0(8) or later
  - Cisco UCS Manager 2.2(6) or later (for integrated servers only)
-

For the Cisco 12G SAS modular RAID controller, select an appropriate optional RAID configuration listed in [Table 8 on page 27](#)

NOTE: The Cisco 12G SAS modular RAID controller can be ordered with or without an optional FBWC (cache). The FBWC option backs up the RAID controller write cache. The FBWC is available in 512 MB, 1 GB, 2 GB, or 4 GB sizes. See [Table 8 on page 27](#) for details.

NOTE: For all valid combinations of embedded RAID and internal/external RAID controller combinations, see [RAID Details, page 72](#).

[Table 7](#) shows the product ID for the C220 M4 server entry-level RAID solution. This RAID option is accomplished with embedded software that supports a limited number of drives, operating systems, and virtualized environments. For a more comprehensive enterprise RAID solution, choose the Cisco 12G SAS modular RAID controller listed in [Table 8](#).

Embedded Software RAID 5 Key Upgrade	
UCSC-SWRAID5	<p>Embedded Software RAID 5 key upgrade, consisting of a storage controller unit (SCU) module that plugs into a 2-pin header on the motherboard, supporting up to eight internal SATA-only HDDs. See <a href="#">Embedded SATA RAID: Two SATA Controllers, page 74</a>. This module upgrades the default embedded software RAID to add RAID 5. This option supports RAID 0, 1, 10, 5 and operates at 6 Gbps. Operating systems supported are Windows and Linux only (no VMware support).</p> <p>VMware ESX/ESXi or any other virtualized environments (such as Hyper-V, Xen, or KVM) are not supported for use with the embedded software RAID controller.</p>

<b>SuperCap Option</b>	
UCSC-MRAID-SC=	Spare SuperCap for Cisco 12G SAS Modular RAID, including all cables. This is a spare SuperCap. It is the exact same SuperCap that ships with the FBWC options listed earlier in this table and can be used as a replacement or upgrade part.
<b>RAID Configuration Options (not available for Cisco 12 Gbps Modular SAS HBA or embedded software RAID)</b>	
R2XX-SRAID0	Enable Single Disk Raid 0 Setting
R2XX-RAID0	Factory preconfigured RAID striping option Enable RAID 0 Setting. Requires a minimum of one hard drive.

Table 8 Hardware Controller Options (*continued*)

Product ID (PID)	PID Description
R2XX-RAID1	Factory preconfigured RAID mirroring option Enable RAID 1 Setting. Requires exactly two drives with the same size, speed, capacity.
R2XX-RAID5	Factory preconfigured RAID option Enable RAID 5 Setting. Requires a minimum of three drives of the same size, speed, capacity.
R2XX-RAID6	Factory preconfigured RAID option Enable RAID 6 Setting. Requires a minimum of four drives of the same size, speed, capacity.

NOTE: Although RAID levels 50 and 60 are not orderable from the factory, they are supported for selected controllers as shown in [Table 8](#).

### Approved Configurations

- The embedded software RAID default supports up to 8 internal SATA HDDs with RAID 0, 1, 10 support.
- The embedded software RAID 5 upgrade key option supports up to 8 internal SATA HDDs with RAID 0, 1, 10, 5 support.
- The Cisco 12G SAS Modular RAID controller upgrade option supports up to 8 internal drives with up to RAID 0, 1, 10, 5, 6, 50, 60 support (with FBWC option chosen).
- The Cisco 12 Gbps Modular SAS HBA upgrade option supports up to 8 internal drives with JBOD support.
- The Cisco 9300-8e 12G SAS HBA supports up to 8 external SAS ports with JBOD support.

See [Table 9](#) for a summary of the supported controller configuration options.

## Notes . . .

- The RAID configuration options listed in [Table 8 on page 27](#) are not available if you have embedded software RAID or choose the embedded software RAID 5 key upgrade (in this case, you must configure RAID yourself using separate software).
- If you want to boot from a device other than the Cisco 12G SAS Modular RAID controller or Cisco 12 Gbps Modular SAS HBA, you can leave the card installed. Just disable the OPROM for its slot, and the system will boot even with the card installed.
- External drive PCIe controller card is the Cisco 9300-8e 12G SAS HBA and can be installed simultaneously with the Cisco 12G SAS Modular RAID controller card or Cisco 12 Gbps Modular SAS HBA.
- Only slot 1 is supported for 1-CPU systems.

## Caveats

- A maximum of one Cisco 9300-8e 12G SAS HBA can be installed, and it can be installed in any slot (depending on the number of CPUs installed). The system can support combinations of one Cisco 9300-8e 12G SAS HBA and a Storage Accelerator card along with either a Cisco 12G SAS Modular RAID Controller, or a Cisco 12 Gbps Modular SAS HBA.
- For the Cisco 12G SAS Modular RAID controller, you can choose an optional RAID configuration (up to RAID 0, 1, 10, 5, or 6 if optional FBWC option is chosen), which is preconfigured at the factory. The RAID level you choose must be an available RAID choice for the controller selected. RAID levels 50 and 60 are supported, although they are not available as configuration options. It plugs into an internal RAID controller slot and can be combined with one UCS 9300-8e 12G SAS HBA.

- A system supports up to 8 SATA-only HDDs through embedded software RAID if no Cisco 12G SAS Modular RAID controller or Cisco 12 Gbps Modular SAS HBA is chosen.

NOTE: For more important information regarding RAID support, see [RAID Details, page 72](#) and [RAID Option ROM \(OPROM\) Settings, page 73](#).

## STEP 5 SELECT HARD DISK DRIVES (HDDs) or SOLID STATE DRIVES (SSDs)

The standard disk drive features are:

- 2.5-inch small form factor
- Hot-pluggable
- Drives come mounted in sleds

Notes . . .

1. Operating system support on 4k sector size drives is as follows:

- Windows: Win2012 and Win2012R2.
- Linux: RHEL 6.5/6.6/7.0/Sles 11 SP3 and Sles 12.
- ESXi/Vmware is not supported

EFI mode is available only for boot support- legacy boot mode is not supported. EFI mode is needed only when you boot from 4K format drives.

Ensure that the 4K sector size and 512 byte sector size drives are not configured as part of the same RAID volume.

2. This drive is supported only with embedded RAID.
3. Targeted for write centric IO applications. Supports endurance of 10 FDWP (Full drive writes per day). Target applications are caching, online transaction processing (OLTP), data warehousing, and virtual desktop infrastructure (VDI).
4. Targeted for read centric IO applications. Supports endurance of 1 FDWP (Full drive write per day). Target applications are boot, streaming media, and collaboration.

The available plug-in PCIe SSD drives and kit are listed in [Table 11](#).

Table 11 Available Plug-In NVMe PCIe SSDs<sup>1</sup>

Product ID (PID)	PID Description	Drive Type	Capacity

C220 M4 NVMe PCIe SSD riser card kit and cables <sup>2</sup>			
UCSC-PCI-2B-220M4			

Notes . . .

1. If you choose one or two PCIe SSD drives, drive slots 1 and 2 at the front of the chassis are reserved for these drives (see [Figure 2 on page 6](#) for drive slot numbering).
2. You must order a riser card kit and cables if you order an NVMe PCIe SSD. One riser card kit and cables supports up to two NVMe PCIe SSDs.

### Approved Configurations

#### (1) Embedded Software RAID or Embedded Software RAID 5 Key Upgrade

- Select up to eight SATA-only HDDs from [Table 10 on page 33](#).

#### (2) Cisco 12G SAS Modular RAID Controller

- If you selected a Cisco 12G SAS Modular RAID controller you have the following options:
  - Cisco 12G SAS Modular RAID controller *with no FBWC option* (supports JBOD, RAID 0, 1, 10)
  - Cisco 12G SAS Modular RAID controller *with FBWC option* (supports JBOD and up to RAID 0, 1, 10, 5, 6, 50, and 60)
  - For either option, select up to eight SAS HDDs, eight SAS SSDs, or eight SATA SSDs listed in [Table 10](#). The Cisco 12G SAS Modular RAID controller does not support SATA HDDs.

#### (3) Cisco 12 Gbps Modular SAS HBA

- If you selected a Cisco 12 Gbps Modular SAS HBA, select up to eight SAS HDDs or eight SAS/SATA SSDs.

See [SELECT RAID CONTROLLERS, page 25](#) for more details.

#### (4) Systems Using Plug-in NVMe PCIe SSDs

Systems using NVMe PCIe SSDs are controlled through the PCIe bus. If you choose one or two NVMe PCIe SSDs, they must be plugged into only drive slots 1 and 2 in the front of the chassis. Additionally, any system implementing NVMe PCIe SSDs must be ordered with two CPUs.

#### Caveats

---

- You can choose only SATA HDDs when using embedded software RAID.
- You can choose only SAS HDDs or SAS/SATA SSDs when using the Cisco 12G SAS Modular RAID Controller or Cisco 12 Gbps Modular SAS HBA.
- You can mix HDDs and SSDs as long as you keep all HDDs in their own RAID volume and all SSDs in their own RAID volume.
- You can mix SAS HDDs and SAS/SATA SSDs when using the Cisco 12G SAS Modular RAID Controller or Cisco 12 Gbps Modular SAS HBA.
- If you order any NVMe PCIe SSDs, you must also order two CPUs.
- A maximum of two NVMe PCIe SSDs can be ordered.
- NVMe PCIe SSDs are not bootable
- NVMe PCIe SSDs cannot be controlled with a RAID controller.

## STEP 6 SELECT PCIe OPTION CARD(S)

The standard PCIe card offerings are:

- Modular LAN on Motherboard (mLOM)
- Virtual Interface Cards (VICs)
- Network Interface Cards (NICs)
- Converged Network Adapters (CNAs)
- Host Bus Adapters (HBAs)
- UCS Storage Accelerators

### Select PCIe Option Cards

## Notes . . .

1. The mLOM cards do not plug into any of the riser 1 or riser 2 card slots; instead, they plug into a connector inside the server chassis.
2. A maximum of two storage accelerator cards are supported if they are half height; the supported number of full height cards is one.

## Approved Configurations

## (1) 1-CPU Systems

- You can select up to one PCIe option card (slot 1 for 1-CPU systems) listed in [Table 12](#).

## (2) 2-CPU Systems

- You can select up to two PCIe option cards (slots 1 and 2 for 2-CPU systems) listed in [Table 12](#).

## Caveats

---

- A maximum of two storage accelerator cards are supported if they are half height; the supported number of full-height cards is one.
- For 1-CPU systems:
  - Only the full-height PCIe slot on riser 1 (slot 1) is supported
  - Only a single plug-in PCIe VIC card is supported and must be installed in slot 1 (the full-height slot). However, in addition to the one PCIe VIC card, you can also choose to install an mLOM VIC card.
  - If any of the Storage Accelerator cards are installed, they can be installed only in slot 1.
- For 2-CPU systems:
  - Both PCIe slots (slots 1 and 2) are supported
  - Two plug-in PCIe VIC cards can be installed in 2-CPU systems, using slots 1 and 2. In addition, you can order an mLOM VIC card, which is installed in the mLOM slot inside the chassis and thus have three VIC cards in operation at the same time. See [Table 12 on page 37](#) for the selection of plug-in and mLOM VIC cards. See also [Table 1 on page 8](#).
  - If any of the Storage Accelerator cards are installed, they can be installed only in slot 1.
- Other considerations for the Cisco VIC 1225/1225T/1227/1227T/1385 cards:
  - VIC 1225 and VIC 1227/1227T support 10G SFP+ optical and copper twinax connections
  - VIC 1225T Supports RJ45 Category 6 or better twisted pair cable connections
  - VIC 1385 supports a 4x10 Gbps QSFP to SFP breakout fiber cable.
  - The 2-CPU version of the server supports installation of two PCIe Cisco VIC 1225/1225T/1385 card and they are supported in PCIe slots 1 and 2. Slot 1 is the primary slot for UCSM integration and for Cisco card NIC mode.
  - The server supports up to two PCIe Cisco VICs (1225, 1225T, 1385) plus an MLOM VIC (1227, 1227T), however, single wire management is supported on only one VIC at a time. If multiple VICs are installed on a server, only one slot has NCSI enabled at a time and for single wire management, priority goes to the MLOM slot, then slot 1, then slot 2 for NCSI management traffic. When multiple cards are installed, connect the single wire management cables in the priority order mentioned above.
  - Installation of the Cisco UCS VIC1225 requires that the server has CIMC firmware version 1.4(6) or later installed and VIC firmware of 2.1(0) or later. Installation of the Cisco UCS VIC1225T requires that the server has CIMC firmware version 1.5(1) or later installed and VIC firmware of 2.1(1) or later.
  - The VIC features mentioned in this section are supported with the following software releases: 2.0.6 (CIMC) and 2.2.5a (UCSM).
- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C220 M4 server, but are not sold on the Cisco pricelist, check the Hardware Compatibility List at this URL:

[http://www.cisco.com/en/US/products/ps10477/prod\\_technical\\_reference\\_list.html](http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html)

## STEP 7 ORDER OPTIONAL NETWORK CARD ACCESSORIES

Copper twinax cables and SFP optical modules may be ordered to support the two-port network cards that are available with the server.

### Choose Optional Twinax Cables

*Table 13* lists the copper twinax cables available for the PCIe cards. You can choose cable lengths of 1, 3, 5, 7, or 10 meters. The two longer cables (7 and 10 meters) are active, which means that they contain active components within the SFP+ housing to improve signal quality.

Table 13 Available Twinax Cables

Product ID (PID)	PID Description
SFP-H10GB-CU1M	10GBASE-CU SFP+ Cable (1 M)
SFP-H10GB-CU3M	10GBASE-CU SFP+ Cable (3 M)
SFP-H10GB-CU5M	10GBASE-CU SFP+ Cable (5 M)
SFP-H10GB-ACU7M	10GBASE-CU SFP+ Cable (7 M)
SFP-H10GB-ACU10M	10GBASE-CU SFP+ Cable (10 M)

### Approved Configurations

#### (1) Choose Up to Two Twinax Cables for Each Network Card Ordered

- You may choose one or two twinax cables for each compatible PCIe network card ordered. The cables can be different lengths; however, you would normally order two cables of equal lengths to connect to the primary and redundant network switching equipment.

### Choose Optional SFP Modules

Optical Cisco SFP+ modules are listed in *Table 14*.

Table 14 Available SFP Modules

Product ID (PID)	PID Description
SFP-10G-SR	10GBASE-SR SFP+ Module 850 nm, multimode, SR, 3.3V, LC connector, with Digital Optical Monitoring
SFP-10G-LR	10GBASE-LR SFP+ Module 1310 nm, single mode, LR, 3.3 V, with Digital Optical Monitoring
DS-SFP-FC8G-SW	8 Gbit SFP+ Module 850 nm, multimode, SR, 3.3V, LC connector, with Digital Optical Monitoring

## Approved Configurations

---

### (1) Choose Up to Two SFP+ Modules for Each Network Card Ordered

- You may choose one or two SFP+ optical modules cables for each compatible PCIe network card ordered. You would normally order two modules for connecting to the primary and redundant network switching equipment. With the SFP+ optical modules, you can use common fiber optic cables, widely available.

See the *Figure 5 on page 44* for typical SFP+ and twinax connections to the network cards.

## Caveats

---

Check the table on the following page for compatibility between the PCIe network cards and SFPs or twinax cables.

**NOTE:** The table shows all PCIe network cards for all C-series servers. Not all of the cards shown in the table are supported in this server. The intent of the table is to show compatibility between cards and twinax cables or SFPs.

## STEP 8 ORDER POWER SUPPLY

The C220 M4 SFF server accommodates two power supplies. A lightly loaded server can operate from one 770 W AC power supply or one 1050 W DC power supply. A fully loaded server might need to be powered with two power supplies (see [Table 16](#)).

Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

## STEP 10 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM

### Select a Tool-Less Rail Kit

---

Select a tool-less rail kit from [Table 18](#).

Table 18 Tool-Less Rail Kit Options

Product ID (PID)	PID Description
UCSC-RAILF-M4	Friction Rail Kit for C220 M4 Servers
UCSC-RAILB-M4	Ball Bearing Rail Kit for C220 M4 and C240 M4 Rack Servers

### Select an Optional Reversible Cable Management Arm

---

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use [Table 19](#) to order a cable management arm.

Table 19 Cable Management Arm

Product ID (PID)	PID Description
UCSC-CMAF-M4	Reversible CMA for C220 M4 tool-less friction and ball bearing rail kit

For more information about the tool-less rail kit and cable management arm, see the *Cisco UCS C220 M4 Installation and Service Guide* at this URL:

[http://www.cisco.com/c/en/us/td/docs/unified\\_computing/ucs/c/hw/C220M4/install/C220M4.html](http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C220M4/install/C220M4.html)

**NOTE:** If you plan to rackmount your UCS C220 M4 server, you must order one of the tool-less rail kits.

---

## STEP 11 SELECT NIC MODE (OPTIONAL)

By default, the C220 M4 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated Management Controller (CIMC). The Cisco VIC card must be installed in a slot with NCSI support.

To change the default NIC mode to Dedicated, select the UCSC-DLOM-01 PID shown in [Table 20](#). In Dedicated NIC mode, the CIMC can be accessed only through the dedicated management port. See [Chassis Rear View, page 7](#) for the location of the management port.

To change the default NIC mode to Cisco Card Mode, select the UCSC-CCARD-01 PID shown in [Table 20](#). In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

For more details on all the NIC mode settings, see

[http://www.cisco.com/c/en/us/td/docs/unified\\_computing/ucs/c/sw/gui/config/guide/2-0/b\\_Cisco\\_UCS\\_C-series\\_GUI\\_Configuration\\_Guide\\_201.pdf](http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/sw/gui/config/guide/2-0/b_Cisco_UCS_C-series_GUI_Configuration_Guide_201.pdf)

## STEP 12 ORDER A TRUSTED PLATFORM MODULE (OPTIONAL)

Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

The TPM ordering information is listed in [Table 21](#).

### Caveats

---

- Install either one or two 64 GB SD cards or one or two 32 GB SD cards
- Do not mix SD card sizes

## STEP 14 ORDER OPTIONAL USB 3.0 DRIVE

You can order one optional USB 3.0 drive. The USB drive ordering information is listed in [Table 24](#).

## STEP 17 SELECT SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

### Unified Computing Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) onsite parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Ongoing downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

### SMARTnet for UCS

For support of the entire Unified Computing System, Cisco offers the Cisco SMARTnet for UCS Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world.

For UCS blade servers, there is Smart Call Home, which provides proactive, embedded diagnostics and real-time alerts. For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco SMARTnet for UCS Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco's extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. You can choose a desired service listed in [Table 27](#).

### SMARTnet for UCS Hardware Only Service

For faster parts replacement than is provided with the standard Cisco Unified Computing System warranty, Cisco offers the Cisco SMARTnet for UCS Hardware Only Service. You can choose from two levels of advanced onsite parts replacement coverage in as little as four hours. SMARTnet for UCS Hardware Only Service provides remote access any time to Cisco support professionals who can determine if a return materials authorization (RMA) is required. You can choose a service listed in [Table 28](#).

### Unified Computing Partner Support Service

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

Partner Unified Computing Support Options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

PSS is available to all Cisco PSS partners, but requires additional specializations and requirements. For additional information, see the following URL:

[www.cisco.com/go/partnerucssupport](http://www.cisco.com/go/partnerucssupport)

The two Partner Unified Computing Support Options include:

- Partner Support Service for UCS
- Partner Support Service for UCS Hardware Only

Partner Support Service for UCS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support.

See [Table 29](#).

### Unified Computing Combined Support Service

Combined Services makes it easier to purchase and manage required services under one contract. SMARTnet services for UCS help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco Unified Computing System (Cisco UCS), the more important the technology becomes to your business. These services allow you to:

- Optimize the uptime, performance, and efficiency of your UCS
- Protect your vital business applications by rapidly identifying and addressing issues
- Strengthen in-house expertise through knowledge transfer and mentoring
- Improve operational efficiency by allowing UCS experts to augment your internal staff resources
- Enhance business agility by diagnosing potential issues before they affect your operations

You can choose a service listed in [Table 31](#).

#### Unified Computing Drive Retention Service

With the Cisco Unified Computing Drive Retention (UCDR) Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive. In exchange for a Cisco replacement drive, you provide a signed Certificate of Destruction (CoD) confirming that the drive has been removed from the system listed, is no longer in service, and has been destroyed.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The UCDR service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in [Table 32](#).

**NOTE:** Cisco does not offer a certified drive destruction service as part of this service.

1. Use these same base PIDs to order spare racks (available only as next-day replacements).

For more information about the R42610 rack, see [RACKS, page 81](#).

## OPTIONAL STEP - ORDER PDU

An optional power distribution unit (PDU) is available from Cisco for the C-Series rack servers, including the C220 M4 server. This PDU is available in a zero rack unit (RU) style (see [Table 33](#)).

Table 34 PDU Options

## CPUs and DIMMs

### Physical Layout

Each CPU has four DIMM channels:

- CPU1 has channels A, B, C, and D
- CPU2 has channels E, F, G, and H

Each DIMM channel has three slots: slot 1, slot 2, and slot 3. The blue-colored DIMM slots are for slot 1, the black-colored slots for slot 2, and the white slots for slot 3.

As an example, DIMM slots A1, B1, C1, and D1 belong to slot 1, while A2, B2, C2, and D2 belong to slot 2.

*Figure 8* shows how slots and channels are physically laid out on the motherboard. The DIMM slots on the right half of the motherboard (channels A, B, C, and D) are associated with CPU 1, while the DIMM slots on the left half of the motherboard (channels E, F, G, and H) are associated with CPU 2. The slot 1 (blue) DIMM slots are always located farther away from a CPU than the corresponding slot 2 (black) and slot 3 (white) slots. Slot 1 slots (blue) are populated before slot 2 slots (black) and slot 3 (white) slots.

Figure 8 Physical Layout of CPU DIMM Channels and Slots

## Memory Population Rules

When considering the memory configuration of your server, you should consider the following items:

- Each channel has three DIMM slots (for example, channel A = slots A1, A2, and A3).
  - A channel can operate with one, two, or three DIMMs installed.
  - If a channel has only one DIMM, populate slot 1 first (the blue slot).
- When both CPUs are installed, populate the DIMM slots of each CPU identically.
  - Fill blue slots in the channels first: A1, E1, B1, F1, C1, G1, D1, H1
  - Fill black slots in the channels second: A2, E2, B2, F2, C2, G2, D2, H2
  - Fill white slots in the channels third: A3, E3, B3, F3, C3, G3, D3, H3
- Any DIMM installed in a DIMM socket for which the CPU is absent is not recognized.
- Observe the DIMM mixing rules shown in [Table 35](#)

Table 35 DIMM Rules for C220 M4 Servers

DIMM Parameter	DIMMs in the Same Channel	DIMM in the Same Slot <sup>1</sup>
<u>DIMM Capacity</u>		
RDIMM = 8, 16, or 64 GB LRDIMM = 32 GB	DIMMs in the same channel (for example, A1, A2, and A3) can have different capacities.	For best performance, DIMMs in the same slot (for example, A1, B1, C1, D1) should have the same capacity.
	Do not mix LRDIMMs with RDIMMs	Do not mix LRDIMMs with RDIMMs
<u>DIMM Speed</u>		
	DIMMs will run at the lowest speed of the DIMMs/CPUs installed	DIMMs will run at the lowest speed of the DIMMs/CPUs installed
<u>DIMM Type</u>		
RDIMMs or LRDIMMs	Do not mix DIMM types in a channel	Do not mix DIMM types in a slot
1 DPC, 2 DPC, or 3 DPC		
DIMMs per Channel (DPC)	See <a href="#">Table 5 on page 22</a> for valid LRDIMM and RDIMM 1 DPC, 2 DPC, and 3 DPC memory configurations	

Notes . . .

1. Although you can have different DIMM capacities in the same slot, this will result in less than optimal performance. For optimal performance, all DIMMs in the same slot should be identical.

## DIMM Population Order

Populate the DIMMs for a CPU according to [Table 36](#).

Table 36 DIMM Population Order per CPU

DIMMs per CPU	Populate CPU 1 Slots	Populate CPU 2 Slots
1	A1	E1
2	A1, B1	E1, F1
3	A1, B1, C1	E1, F1, G1
4	A1, B1, C1, D1	E1, F1, G1, H1
6 <sup>1</sup>	A1, B1, C1, D1 A2, C2	E1, F1, G1, H1 E2, G2
8	A1, B1, C1, D1, A2, B2, C2, D2	E1, F1, G1, H1, E2, F2, G2, H2
12	A1, B1, C1, D1, A2, B2, C2, D2, A3, B3, C3, D3	E1, F1, G1, H1, E2, F2, G2, H2, E3, F3, G3, H3

Notes . . .

1. Not recommended (for performance reasons)

## Recommended Memory Configuration

This section explains the recommended DIMM population order rules for the C220 M4 server.

- All DIMMs must be DDR4 DIMMs.
- Do not mix:
  - DIMMs with different clock rates in a channel
  - RDIMMs and LRDIMMs
- There are blue, black, and white DIMM slots. Populate blue slots first.
- When DIMMs ranks are mixed in the same channel, always populate the highest rank DIMM in the blue DIMM slot and lower rank DIMM(s) in the black and white DIMM slots.

Many memory configurations are possible. For best results, follow [Table 37](#) when populating 2133-MHz DIMMs for Intel Xeon E5-2600 v3 CPUs.

**NOTE:** These tables list only some recommended and suggested configurations. There are numerous other possible configurations supported by Cisco. Cisco supports all mixing and population configurations of the Cisco DIMMs as long as the mixing does not violate the few fundamental rules noted in this document.

Table 37 Recommended Memory Configurations for Intel Xeon E5-2600 v3 CPUs (with 2133-MHz DIMMs)<sup>1</sup>

Total System Memory Size	CPU 1 DIMMs			CPU 2 DIMMs			DIMM Max Speed (MHz)	Total DIMMs
	Blue Slots Slot 1 (A1,B1, C1,D1)	Black Slots Slot 2 (A2,B2, C2,D2)	White Slots Slot 3 (A3,B3, C3,D3)	Blue Slots Slot 1 (E1,F1, G1,H1)	Black Slots Slot 2 (E2,F2, G2,H2)	White Slots Slot 3 (E3,F3, G3,H3)

## RAID Details

The available RAID configurations are shown in this section.

By default, the server comes with embedded software RAID

To upgrade from the default, select one of these:

- The embedded software RAID 5 key upgrade option from [Table 7 on page 27](#), or
- One Cisco 12G SAS Modular RAID controller upgrade or Cisco 12 Gbps Modular SAS HBA from [Table 8 on page 27](#), or
- One Cisco 9300-8E 12G SAS HBA controller from [Table 8 on page 27](#), or
- One Cisco 12G SAS Modular RAID controller or Cisco 12 Gbps Modular SAS HBA from [Table 8 on page 27](#) and one Cisco 9300-8E 12G SAS HBA from [Table 8 on page 27](#)

Select an appropriate optional RAID configuration listed in [Table 8 on page 27](#)

## RAID Option ROM (OPROM) Settings

The server contains an Option ROM (OPROM) for the PCIe slots. The server has a finite amount of option ROM with which it can boot up devices. Go into the BIOS and disable the OPROM on the PCIe slots not used for booting so that resources are available for the slots that are used for booting. An example OPROM BIOS screen is shown in *Figure 9*.

Figure 9 Example BIOS Screen for OPROM

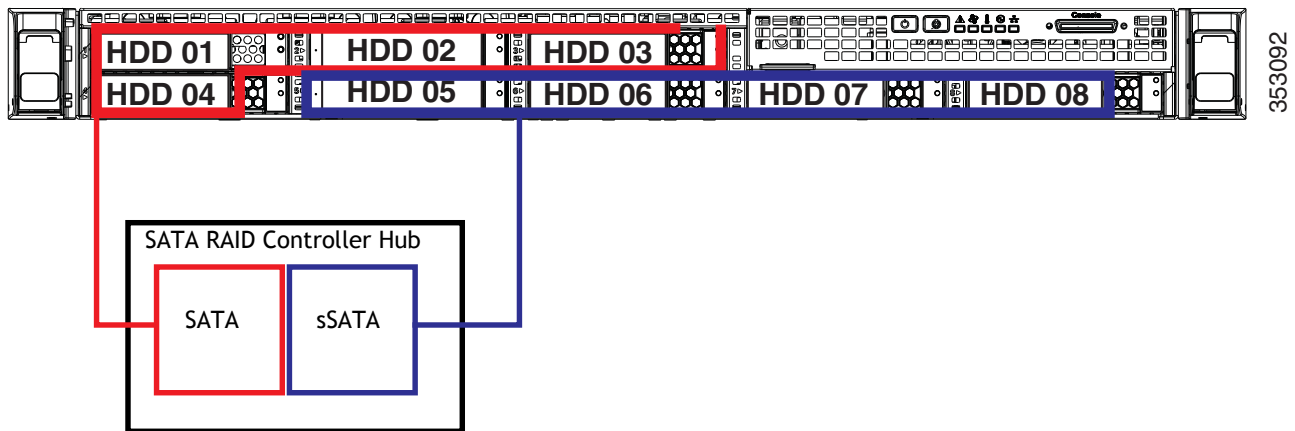

## Embedded SATA RAID: Two SATA Controllers

The embedded SATA RAID controller hub is split into two controllers, SATA and sSATA (secondary SATA). These two controllers are seen as separate RAID controllers in the Cisco IMC interface and are configurable separately.

- The first SATA controller controls drives 1-4; the secondary sSATA controller controls drives 5-8.
- When configuring RAID groups, you cannot create a group that spans more than four drives.
  - The first SATA controller can control a RAID group of up to four drives, consisting only of drives 1-4.
  - The secondary sSATA controller can control a RAID group of up to four drives, consisting only of drives 5-8. See [Figure 10](#).

Figure 10 Embedded RAID Controller RAID Groups

- Each controller is listed separately in the BIOS. You can select the boot order of the controllers in the BIOS (use the Boot Options tab in the BIOS Setup Utility).

Note the following considerations:

- The default setting for this embedded controller hub is SATA RAID 0, 1, and 10 support for up to eight SATA drives (in two groups of four drives).
- You can upgrade this to support to SATA RAID 0, 1, 10, and 5 support for up to eight SATA drives (in two groups of four drives) by installing a RAID 5 key module on the motherboard.
- When you order the server with this embedded controller, the controller is enabled in the BIOS.
- You cannot downgrade from using a HW RAID controller card to using the SW RAID embedded controller.

## To Create a RAID Group

(1) While the server is booting, wait for the prompt and press function key F2 as shown in [Figure 11](#).

UCSC-PCI-2B-220M4=	C220 M4 PCIe Riser 1&2 Assy + PCIe SSD connector 8639

### Notes . . .

1. A drive blanking panel must be installed if you remove a disk drive from a UCS server. These panels are required to maintain system temperatures at safe operating levels, and to keep dust away from system components.
2. Required if ordering the RAID controller as a spare or to replace damaged cables

## Adding an Additional CPU (with CPU heat sink) or Replacing CPUs

All Cisco UCS two CPU socket-capable servers can be upgraded from having one to having two CPUs configured or can also support replacement of the CPUs. You will need to order and install a heat sink when adding any additional CPU to a server. Instructions for installing the new CPU or replacing CPUs and heat sink can be found at the following link:

[http://www.cisco.com/c/en/us/td/docs/unified\\_computing/ucs/c/hw/C220M4/install/C220M4.html](http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C220M4/install/C220M4.html)

**NOTE:** Unlike previous generation servers, the C220 M4 has tool-less CPU sockets, so no separate tools (such as “pick n place” tools) are required to add or replace CPUs.

---

See the section titled “Replacing CPUs and Heatsinks.”

## Motherboard Lithium Battery

You can order a replacement motherboard battery. Installation instructions are found at this link:

[http://www.cisco.com/c/en/us/td/docs/unified\\_computing/ucs/c/hw/C220M4/install/C220M4.html](http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C220M4/install/C220M4.html)

See the section titled “Replacing the Motherboard RTC Battery.”

## Thermal Grease (with syringe applicator) for CPU to Heatsink Seal

Thermal grease must be applied to the top of the CPU where it comes in contact with the heat sink (a grease syringe also ships with each CPU spare option kit). Instructions for applying thermal grease are found at:

[http://www.cisco.com/c/en/us/td/docs/unified\\_computing/ucs/c/hw/C220M4/install/C220M4.html](http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C220M4/install/C220M4.html)

See the section titled “Replacing CPUs and Heatsinks.”

**CAUTION:** Use only the thermal grease specified for this server (UCS-CPU-GREASE3=). This thermal grease comes in a white-tipped syringe and is to be used only in the C220 M4 and C240 M4 servers. Other servers use thermal grease in a blue-tipped syringe (UCS-CPU-GREASE=).

Thermal grease for other systems may have different thermal conductivity properties and may cause overheating if used in the C220 M4 or C240 M4 servers.

**DO NOT** use thermal grease available for purchase at any commercial electronics store. If these instructions are not followed, the CPU may overheat and be destroyed.

---

NOTE: When you purchase a spare CPU, the thermal grease with syringe applicator is included.

---

### Air Baffle Replacement Kit

Air baffles are designed to direct airflow through the server to maintain server temperature at a safe operating level. These baffles must always remain installed during server operation. The Air Baffle Replacement Kit includes the air baffles needed for one UCS C220 M4 server.

### CPU Heat Sink Cleaning Kit

The cleaning kit is used to remove the existing thermal compound from the bottom of the heat sink during a CPU replacement process. Instructions for cleaning are found at the following link:

[http://www.cisco.com/c/en/us/td/docs/unified\\_computing/ucs/c/hw/C220M4/install/C220M4.html](http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C220M4/install/C220M4.html)

See the section titled “Replacing CPUs and Heatsinks.”

NOTE: When you purchase a spare CPU, the CPU cleaning kit is included.

## RACKS

The Cisco R42610 rack (see [Figure 15](#)) is certified for Cisco UCS installation at customer sites and is suitable for the following equipment:

- Cisco UCS B-Series servers and fabric interconnects
- Cisco UCS C-Series and select Nexus switches

The rack is compatible with hardware designed for EIA-standard 19-inch racks. Rack specifications are listed in [Table 40](#).

Table 40 Cisco R42610 Rack Specifications

## PDU

Cisco RP Series Power Distribution Units (PDUs) offer power distribution with branch circuit protection.

Cisco RP Series PDU models distribute power to up to 24 outlets. The architecture organizes power distribution, simplifies cable management, and enables you to move, add, and change rack equipment without an electrician.

With a Cisco RP Series PDU in the rack, you can replace up to two dozen input power cords with just one. The fixed input cord connects to the power source from overhead or under-floor distribution. Your IT equipment is then powered by PDU outlets in the rack using short, easy-to-manage power cords.

The C-series severs accept the zero-rack-unit (ORU) PDU. See [Figure 16](#).

Figure 16 Zero Rack Unit PDU (PID = RP208-30-2P-U-2)

1	Breakers	3	C19 plugs
2	Ground connection	4	C13 plugs

Cisco RP Series PDU models provide two 20-ampere (A) circuit breakers for groups of receptacles. The effects of a tripped circuit are limited to a receptacle group. Simply press a button to reset that circuit.

## KVM CABLE

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The KVM cable ordering information is listed in *Table 41*.
