## OVERVIEW

UCS C240 M5 SFF server extends the capabilities of Cisco's Unified Computing System portfolio in a 2U form factor with the addition of the Intel® Xeon® Processor Scalable Family, 24 DIMM slots for 2666 MHz DDR4 DIMMs and capacity points up to 128GB, up to 6 PCI Express (PCIe) 3.0 slots, and up to 26 internal SFF drives. The C240 M5 SFF server also includes one dedicated internal slot for a 12G SAS storage controller card.

The C240 M5 server includes a dedicated internal modular LAN on motherboard (mLOM) slot for installation of a Cisco Virtual Interface Card (VIC) or third-party network interface card (NIC), without consuming a PCI slot, in addition to 2 x 10Gbase-T Intel x550 embedded (on the motherboard) LOM ports.

The Cisco UCS C240 M5 server can be used standalone, or as part of the Cisco Unified Computing System, which unifies computing, networking, management, virtualization, and storage access into a single integrated architecture enabling end-to-end server visibility, management, and control in both bare metal and virtualized environments.

## BASE SERVER STANDARD CAPABILITIES and FEATURES

*Table 1* lists the capabilities and features of the base server. Details about how to configure the server for a particular feature or capability (for example, number of processors, disk drives, or amount of memory) are provided in [CONFIGURING the SERVER, page 14](#).

Table 1 Capabilities and Features

Capability/Feature	Description
Chassis	Two rack unit (2RU) chassis
CPU	One or two Intel® Xeon® processor scalable family CPUs
Chipset	Intel® C620 series chipset
Memory	24 slots for registered ECC DIMMs (RDIMMs), load-reduced DIMMs (LRDIMMs), or through silicon via (TSV) DIMMs
Multi-bit Error Protection	This server supports multi-bit error protection.
Video	The Cisco Integrated Management Controller (CIMC) provides video using the ASPEED Pilot 4 video/graphics controller: <ul style="list-style-type: none"> <li>■ Integrated 2D graphics core with hardware acceleration</li> <li>■ DDR2/3 memory interface supports up to 16 MB directly accessible from host and entire DDR memory indirectly accessible from host processor.</li> <li>■ Supports all display resolutions up to 1920 x 1200 x 32bpp resolution at 60Hz</li> <li>■ High speed Integrated 24-bit RAMDAC</li> <li>■ Single lane PCI-Express Gen2 host interface</li> <li>■ eSPI processor to BMC support</li> </ul>
SATA Interposer Board	An optional SATA interposer board supports up to eight front facing SATA-only drives.
Power subsystem	Up to two of the following hot-swappable power supplies: <ul style="list-style-type: none"> <li>■ 1050 W (AC)</li> <li>■ 1050 W (DC)</li> <li>■ 1600 W (AC)</li> </ul>
WoL	One power supply is mandatory; one more can be added for 1 + 1 redundancy.
Front Panel	The Intel x550 10Gbase-T Ethernet LAN ports support the wake-on-LAN (WoL) standard.
ACPI	A front panel controller provides status indications and control buttons.
Fans	This server supports the advanced configuration and power interface (ACPI) 4.0 standard. <ul style="list-style-type: none"> <li>■ Six hot-swappable fans for front-to-rear cooling</li> </ul>

## CONFIGURING the SERVER

Follow these steps to configure the Cisco UCS C240 M5 SFF Rack Server:

- *STEP 1 VERIFY SERVER SKU, page 15*
- *STEP 2 SELECT RISER CARDS (OPTIONAL), page 16*
- *STEP 3 SELECT CPU(s), page 17*
- *STEP 4 SELECT MEMORY, page 20*
- *STEP 5 SELECT RAID CONTROLLERS, page 23*
- *STEP 6 SELECT DRIVES, page 28*
- *STEP 7 SELECT PCIe OPTION CARD(s), page 31*
- *STEP 8 ORDER GPU CARDS (OPTIONAL), page 34*
- *STEP 8 ORDER GPU CARDS (OPTIONAL), page 34*
- *STEP 9 ORDER POWER SUPPLY, page 36*
- *STEP 10 SELECT INPUT POWER CORD(s), page 37*
- *STEP 11 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM, page 41*
- *STEP 12 SELECT MANAGEMENT CONFIGURATION (OPTIONAL), page 42*
- *STEP 13 SELECT SERVER BOOT MODE (OPTIONAL), page 43*
- *STEP 14 SELECT LOCKING SECURITY BEZEL (OPTIONAL), page 44*
- *STEP 15 ORDER SECURITY DEVICES (OPTIONAL), page 45*
- *STEP 16 ORDER OPTICAL DRIVE (OPTIONAL), page 46*
- *STEP 17 ORDER CISCO SD CARD MODULE (OPTIONAL), page 47*
- *STEP 18 ORDER M.2 SATA SSD (OPTIONAL), page 48*
- *STEP 19 ORDER INTERNAL MICRO-SD CARD MODULE (OPTIONAL), page 49*
- *STEP 20 ORDER OPTIONAL USB 3.0 DRIVE, page 50*
- *STEP 21 SELECT OPERATING SYSTEM AND VALUE-ADDED SOFTWARE, page 51*
- *STEP 22 SELECT OPERATING SYSTEM MEDIA KIT, page 57*
- *STEP 23 SELECT SERVICE and SUPPORT LEVEL, page 58*
- *OPTIONAL STEP - ORDER RACK(s), page 64*
- *OPTIONAL STEP - ORDER PDU, page 66*

## STEP 1 VERIFY SERVER SKU

Select one server product ID (PID) from [Table 2](#).

Table 2 PID of the C240 M5 SFF Rack Base Server

Product ID (PID)	Description
UCSC-C240-M5SX	UCS C240 M5 24 SFF front drives with option for two SFF rear drives with no CPU, memory, HDD, PCIe cards, or power supply
UCSC-C240-M5S	UCS C240 M5 8 SFF front drives with option for two SFF rear drives with no CPU, memory, HDD, PCIe cards, or power supply
UCSC-C240-M5SN <sup>1</sup>	UCS C240 M5 10 SFF NVMe (8 front, 2 rear) and 16 (front) SATA/SATA drives with no CPU, memory, HDD, PCIe cards, or power supply

Notes:

1. Available at the end of CY 2017.

The Cisco UCS C240 M5 server:

- Includes either a 24- or 8-drive backplane.

**NOTE:** The C240 M5 SFF server hard drive backplane is not field upgradeable. This means, for example, that you cannot “upgrade” from the 8-drive backplane version to the 24-drive backplane version. Likewise, the backplane is not field “downgradeable.”

- Does not include power supply, CPU, memory, hard disk drives (HDDs), solid-state drives (SSDs), NVMe drives, SD cards, riser 1, riser 2, tool-less rail kit, or PCIe cards.

**NOTE:** Use the steps on the following pages to configure the server with the components that you want to include.

## STEP 2 SELECT RISER CARDS (OPTIONAL)

There are two riser cards per server, riser card 1 and 2. There are two options for riser card 1 (1 and 1B) and four options for riser card 2 (2A, 2B, 2C, and 2D). Riser 2D always ships with UCSC-C240-M5SN and is not supported with any other chassis version. Order one riser card 1 and/or one riser 2 card from [Table 3](#). Riser card 1 is the one on the left when viewed from the back of the server and riser card 2 is on the right.

Table 3 Riser 1 Options

Product ID (PID)	Description
<b>PCIe Riser 1 options</b>	
UCSC-PCI-1-C240M5	Riser 1. Includes 3 PCIe slots (x8, x16, x8). Slots 1 and 2 controlled with CPU1; slot 3 controlled with CPU2.
UCSC-PCI-1B-240M5	Riser 1B. Includes 3 PCIe slots (x8, x8, x8). All slots controlled with CPU1.
<b>PCIe Riser 2 options (all slots controlled with CPU2)</b>	
UCSC-PCI-2A-240M5	Riser 2A. Includes 3 PCIe slots (x16, x16, x8) and supports a GPU.
UCSC-PCI-2B-240M5	Riser 2B. Includes 3 PCIe slots (x8, x16, x8) plus 1 NVMe connector (controls two rear SFF NVMe drives) and supports a GPU.
UCSC-PCI-2C-240M5	Riser 2C. Includes 3 PCIe slots (x8, x8, x8) plus 2 NVMe connectors (one connector for two front SFF NVMe drives and one connector for two rear SFF NVMe drives).

**NOTE:** If no riser 2 option is selected, a riser blanking panel will be installed. You will not be able to install any PCIe cards without a riser selected. Riser 1 is required.

For additional details, see [Riser Card Configuration and Options, page 72](#).

### STEP 3 SELECT CPU(s)

The standard CPU features are:

- Intel® Xeon® processor scalable family
- Intel C620 series chipset
- Cache size of up to 38.5 MB

#### Select CPUs

The available CPUs are listed in [Table 4](#).

Table 4 Available Intel CPUs

Notes:

1. Only CPU PIDs ending in "M" support 1.5 TB/socket of memory, per Intel CPU spec. All other CPU PIDs support 768 GB/socket memory.
2. UPI = Ultra Path Interconnect
3. If higher or lower speed DIMMs are selected than what is shown in the table for a given CPU, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.

## Supported Configurations

---

### (1) 1-CPU configurations:

- Select any one CPU listed in [Table 4 on page 17](#).

### (2) 2-CPU Configurations:

- Select two identical CPUs from any one of the rows of [Table 4 on page 17](#).

## Caveats

---

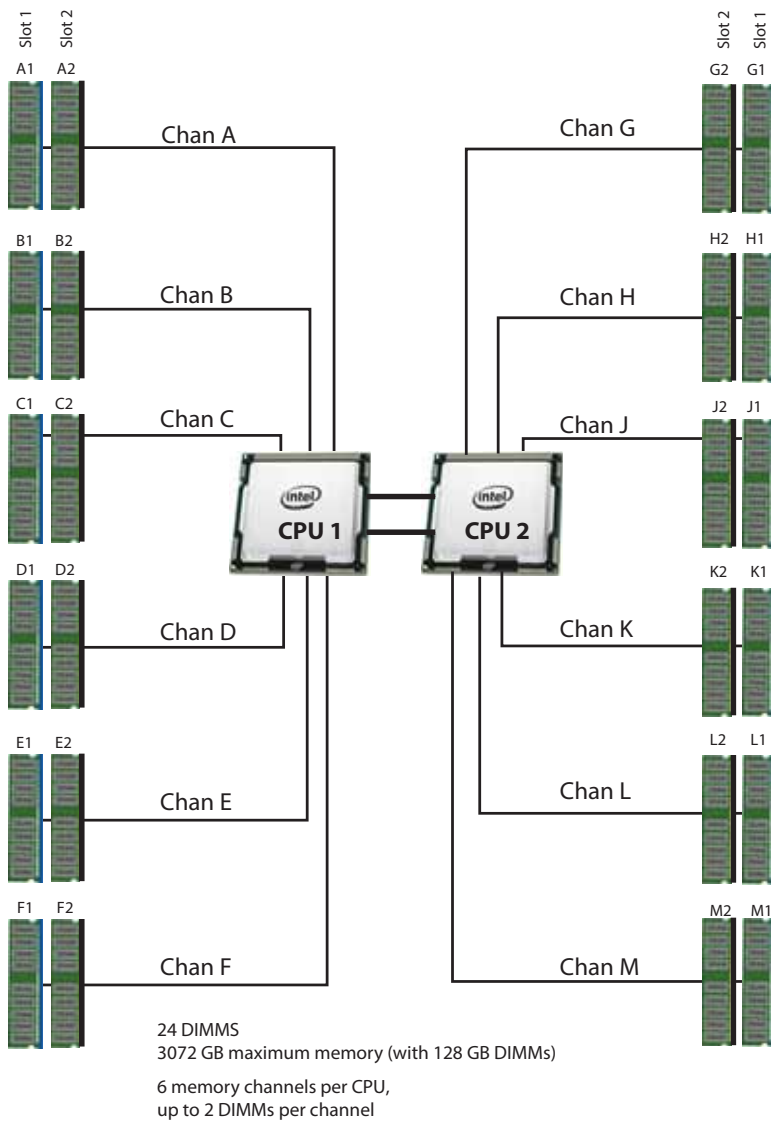

- You can select either one processor or two identical processors.
- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:
  - [STEP 4 SELECT MEMORY, page 20](#) (memory mirroring section)
  - [Table 7 on page 26](#) (RAID support table)
  - [STEP 6 SELECT DRIVES, page 28](#)
  - [STEP 7 SELECT PCIe OPTION CARD\(s\), page 31](#)
  - [ORDER GPU CARDS \(OPTIONAL\), page 34](#)

## STEP 4 SELECT MEMORY

The standard memory features are:

- DIMMs
  - Clock speed: 2666 MHz
  - Ranks per DIMM: 1, 2, 4, or 8
  - Operational voltage: 1.2 V
  - Registered ECC DDR4 DIMMs (RDIMMs), load-reduced DIMMs (LRDIMMs), or through silicon via (TSV) DIMMs.
- Memory is organized with six memory channels per CPU, with up to two DIMMs per channel, as shown in [Figure 5](#).

Figure 5 C240 M5 SFF Memory Organization

## Select DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in [Table 5](#).

**NOTE:** When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

### Approved Configurations

(1) 1-CPU configuration without memory mirroring:

- Select from 1 to 12 DIMMs.

(2) 1-CPU configuration with memory mirroring:

- Select 4, 6, 8, or 12 identical DIMMs. The DIMMs will be placed by the factory as shown in the following table.

CPU 1 DIMM Placement in Channels (for identical ranked DIMMs)	
4	(A1, B1); (D1, E1)
6	(A1, B1, C1); (D1, E1, F1)
8	(A1, A2, B1, B2); (D1, D2, E1, E2)
12	(A1, A2, B1, B2, C1, C2); (D1, D2, E1, E2, F1, F2)

- Select the memory mirroring option (N01-MMIRROR) as shown in [Table 5 on page 21](#).

(3) 2-CPU configuration without memory mirroring:

- Select from 1 to 12 DIMMs per CPU.

(4) 2-CPU configuration with memory mirroring:

- Select 8, 12, 16, or 24 identical DIMMs per CPU. The DIMMs will be placed by the factory as shown in the following table.

	CPU 1 DIMM Placement in Channels (for identical ranked DIMMs)	CPU 2 DIMM Placement in Channels (for identical ranked DIMMs)
	CPU 1	CPU 2
8	(A1,B1); (D1,E1)	(G1, H1); (K1, L1)
12	(A1, B1, C1); (D1, E1, F1)	(G1, H1, J1); (K1, L1, M1)
16	(A1, A2, B1, B2); (D1, D2, E1, E2)	(G1, G2, H1, H2); (K1, K2, L1, L2)
24	(A1, A2, B1, B2, C1, C2); (D1, D2, E1, E2, F1, F2)	(G1, G2, H1, H2, J1, J2); (K1, K2, L1, L2, M1, M2)

- Select the memory mirroring option (N01-MMIRROR) as shown in [Table 5 on page 21](#).

**NOTE:** System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.

## STEP 5 SELECT RAID CONTROLLERS

### RAID Controller Options (internal HDD/SSD support)

#### Embedded Software RAID

The default RAID configuration is embedded software RAID, which supports only SATA HDDs and enterprise value SSDs (RAID 0, 1, 10). A maximum of 8 SATA drives are supported with embedded software RAID. Embedded RAID requires a SATA interposer board.

**NOTE:** Embedded software RAID is limited to Windows and Linux operating systems only. There is no VMWare support for embedded software RAID.

#### Cisco 12G SAS RAID Controller

You can choose a Cisco 12G SAS RAID controller, which plugs into a dedicated RAID controller card slot. This RAID controller supports RAID 0, 1, 5, 6, 10, 50, 60, and JBOD mode.

**NOTE:** The number of RAID groups (virtual drives) supported per RAID controller is as follows:

- Embedded RAID = 8
- Cisco 12G SAS RAID controller = 64

#### Cisco 12G SAS HBA (internal HDD/SSD/JBOD support)

You can choose a SAS HBA for JBOD or Pass-through mode support:

- The Cisco 12G SAS HBA plugs into a dedicated RAID controller slot.

#### RAID Volumes and Groups

When creating each RAID volume, follow these guidelines:

- Use the same capacity for each drive in each RAID volume
- For embedded software RAID:
  - Use only SATA HDDs
  - Embedded software RAID has two ports and each port can control 4 drives, for 8 drives total.
  - Each set of 4 SATA HDDs for a port must be in separate RAID volumes.
  - You cannot mix drives across ports to create a RAID volume.
- For the Cisco 12G SAS RAID controller upgrade:
  - Use either all SAS HDDs, or all SAS SSDs, or all SATA SSDs in each RAID volume

### Select Controller Options

Select as follows:

- For a 26-drive server version, select one of the following:
  - Embedded software RAID (this is the default if no other selection is made), or
  - Cisco 12G SAS RAID controller with 4 GB cache from [Table 6 on page 24](#), or
  - Cisco 12G SAS HBA from [Table 6 on page 24](#), or
- For an 8-drive backplane system, select one of the following:
  - Embedded software RAID (this is the default if no other selection is made), or
  - Cisco 12G SAS RAID controller from [Table 6 on page 24](#), or
  - Cisco 12G SAS HBA (see [Table 6 on page 24](#))

NOTE: The UCSC-C240-M5SN does not support embedded RAID.

For the Cisco 12G SAS RAID controller upgrade, select an appropriate optional RAID configuration listed in [Table 6 on page 24](#)

**NOTE:** Although RAID levels 50 and 60 are not orderable from the factory, they are supported for selected controllers as shown in [Table 6](#)

### Approved Configurations

The C240 M5 SFF server can be ordered as a UCSC-C240-M5SX or UCSC-C240-M5SN (26-drive backplane) or a UCSC-C240-M5S (8-drive backplane).

- The embedded software RAID supports up to 8 internal SATA HDDs with RAID 0, 1, 10 support.

- The embedded software RAID does not support rear SAS/SATA drives, front and rear NVMe are supported.
- There is no RAID support for NVMe drives.
- In an embedded RAID configuration, only embedded software RAID (0, 1, 10) is supported, AHCI mode is not supported.
- The Cisco 12G SAS RAID controller upgrade option supports up to 26 internal drives with up to RAID 0, 1, 10, 5, 6, 50, 60, JBOD mode.
- The Cisco 12 Gbps SAS HBA supports up to 26 internal drives with JBOD support.

See [Table 7](#) for a summary of the supported controller configuration options.

Notes:

1. Operating Systems supported on 4k sector size drives are as follows:

- Windows: Win2012 and Win2012R2
- Linux: RHEL 6.5/6.6/6.7/7.0/7.2/SLES 11 SP3 and SLES 12
- ESXi/VMware does not support 4k format drives; supports only 512e format drives

UEFI Mode must be used when booting from 4K sector size drives, legacy mode is not supported.

Ensure that 4K sector size and 512 byte sector size drives are not mixed in the same RAID volume.

2. Two CPUs must be installed in order to include any number of SFF NVMe PCIe SSDs. If you choose one or two SFF PCIe SSD or SFF NVMe drives, drive slots 1 and 2 at the front of the chassis are reserved for these drives (see [Figure 2 on page 6](#) for drive slot numbering)
3. Targeted for write centric IO applications. Supports endurance of 10 or 3 DWPD (drive writes per day). Target applications are caching, online transaction processing (OLTP), data warehousing, and virtual desktop infrastructure (VDI).
4. Targeted for read centric IO applications. Supports endurance of 1 DWPD (drive write per day). Target applications are boot, streaming media, and collaboration.

Caveats

- You can choose only SATA HDDs when using embedded software RAID. The UCSC-C240-M5SN does not support embedded RAID.
- 2.5-inch SFF NVMe drives are connected directly to the CPU, not managed by the RAID controller.
- You can mix HDDs and SSDs as long as you keep all HDDs in their own RAID volume and all SSDs in their own RAID volume.
- You can mix SAS HDDs and SAS/SATA SSDs when using the Cisco 12G SAS RAID Controller or Cisco 12G SAS HBA.
- If you order any SFF NVMe drives, you must also order two CPUs.
- SFF NVMe drives are bootable in UEFI mode only.
- NVMe HHHL drives are not bootable.
- SED drives can be mixed with the non-SED drives in [Table 8 on page 28](#)

## STEP 7 SELECT PCIe OPTION CARD(s)

The standard PCIe card offerings are:

- Modular LAN on Motherboard (MLOM)
- Virtual Interface Cards (VICs)
- Network Interface Cards (NICs)
- Converged Network Adapters (CNAs)
- Host Bus Adapters (HBAs)
- UCS Storage Accelerators

### Select PCIe Option Cards

The available PCIe option cards are listed in [Table 9](#).

**Notes:**

1. VIC 1385 and 1387 support QSA module (CVR-QSFP-SFP10G)
2. HHL = Half Height Half length

**Caveats**

- For 1-CPU systems:
  - Only PCIe slots 1 and 2 on PCIe riser 1A are available for a 1-CPU system. All three slots (1, 2, and 3) on PCIe riser 1B are available for a 1-CPU system. Slots 1, 2, and 3 are to the left when looking at the rear of the server. Slot 1 is the bottom slot.
  - The PCIe slots on riser 2 are not supported on 1-CPU systems. The riser 2 slots are full-height PCIe slots 4, 5, and 6 (see [Figure 4 on page 8](#)). These are the slots on the right when looking at the rear of the server. Slot 4 is the bottom slot.
  - Only a single plug-in PCIe VIC card may be installed on a 1-CPU system, and it must be installed in slot 2 or 1 of riser 1 or 1B.
  - You can order an mLOM VIC card to be installed in the mLOM slot internal to the chassis and thus have two VIC cards in operation at the same time. If you order a GPU, it must be installed in slot 2, See [Table 9 on page 31](#) for the selection of plug-in and mLOM VIC cards. See also [Table 1 on page 10](#) and [Riser Card Configuration and Options, page 92](#) for the PCIe slot physical descriptions.
- For 2-CPU systems:
  - Six PCIe slots are available, three on PCIe riser 1 or riser 1B (PCIe slots 1, 2, and 3) and three on PCIe riser 2A, 2B or 2C (PCIe slots 4, 5, and 6).
  - Two plug-in PCIe VIC cards can be installed in dual CPU systems, using slots 2 and 5. In addition, you can order an mLOM VIC card, which is installed in the mLOM slot inside the chassis and thus have three VIC cards in operation at the same time. See

[Table 9 on page 31](#) for the selection of plug-in and mLOM VIC cards. See also [Table 1 on page 10](#) and [Riser Card Configuration and Options, page 92](#) for the PCIe slot physical descriptions.

- If GPUs are installed in slots 2 (Riser 1 or 1B) and 5 (Riser 2A or 2B), the NCSI capability automatically switches over to slots 1 (Riser 1 or 1B) and 4 (Riser 2A or 2B). Therefore, Cisco PCIe VICs can be installed in slots 1 and 4 if GPUs are installed in slots 2 and 5. If you order two GPUs, they must be installed in slots 2 and 5 and thus you will not be able to install VIC cards in those slots.

**NOTE:** UCSM managed servers are discoverable only if a VIC is installed in slot 2 or a VIC is installed in the MLOM slot. If you install two GPUs, they must be located in slots 2 and 5. Therefore, if two GPUs are installed, UCSM managed servers are discoverable only if you install a VIC in the MLOM slot.

---

- The server supports up to two PCIe Cisco VICs plus an MLOM VIC

However, single wire management is supported on only one VIC at a time. If multiple VICs are installed on a server, only one slot has NCSI enabled at a time and for single wire management, priority goes to the MLOM slot, then slot 2, then slot 5 for NCSI management traffic. When multiple cards are installed, connect the single wire management cables in the priority order mentioned above.

- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C240 M5 server, but are not sold on the Cisco price list, check the Hardware Compatibility List at this

## STEP 8 ORDER GPU CARDS (OPTIONAL)

### Select GPU Options

The available GPU PCIe options are listed in [Table 10](#).

Table 10 Available PCIe GPU Cards

Product ID (PID)	PID Description	Card Size
GPU PCIe Cards		
UCSC-GPU-M10	NVIDIA M10 GPU	Doublewide (consumes 2 slots)
UCSC-GPU-P40	NVIDIA P40	Doublewide (consumes 2 slots)
UCSC-GPU-P100-12G	NVIDIA P100 12GB	Doublewide (consumes 2 slots)
UCSC-GPU-P100-16G	NVIDIA P100 16GB	Doublewide (consumes 2 slots)
UCSC-GPU-7150x2	AMD Firepro 7150x2	Doublewide (consumes 2 slots)

**CAUTION:** When using the GPU cards, The maximum allowable operating temperature for NVIDIA P40 GPU is 32oC (89oF) and NVIDIA P100 GPU is 28oC (82oF)

**NOTE:** All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM

**NOTE:** All GPU cards require two CPUs and a minimum of two power supplies in the server. 1600 W power supplies are recommended. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

<http://ucspowercalc.cisco.com>

### Caveats

- NVIDIA M10 GPUs can support only less than 1 TB of total memory in the server. Do not install more than fourteen 64-GB DIMMs when using an NVIDIA GPU card in this server.
- GPUs cannot be mixed.
- Slot 5 on riser card 2 is the required slot for the first GPU.
- Slot 2 on riser card 1 is the secondary slot for a second GPU.

Refer to [Table 11](#) for the PCIe slot usage for the following PCIe cards installed in riser 1 and riser 2:

- External RAID
- VIC
- NIC
- HBA
- GPU
- NVMe HDDL.

Table 11 PCIe Slot Usage in Riser 1 (slots 1, 2, 3) and Riser 2 (slots 4, 5, 6)

1A and 2D	Slots 1 and 2	Slots 1, 2, 3, 4, 5, and 6	Slot 2	Slot 2
1B and 2A	Slots 1 and 2	Slots 1, 2, 3, 4, 5, and 6	None	Slot 5
1B and 2B	Slots 1 and 2	Slots 1, 2, 3, 4, 5, and 6	None	Slot 5
1B and 2C	Slots 1 and 2	Slots 1, 2, 3, 4, 5, and 6	None	None
1B and 2D	Slots 1 and 2	Slots 1, 2, 3, 4, 5, and 6	None	None

**NOTE:** UCSM managed servers are discoverable only if a PCIe VIC card is installed in slot 2 or an mLOM VIC card is installed in the mLOM slot. If you install two GPUs, they must be located in slots 2 and 5. Therefore, if two GPUs are installed, UCSM managed servers are discoverable only if you install a VIC in the MLOM slot.

**NOTE:** For more information on the riser card options, see [Riser Card Configuration and Options, page 72](#).

## STEP 9 ORDER POWER SUPPLY

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M5 C-series servers. Each power supply is certified for high-efficiency operation and offer multiple power output options. This allows users to "right-size" based on server configuration, which improves power efficiency, lower overall energy costs and avoid stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

<http://ucspowercalc.cisco.com>

Table 12 Power Supply

Product ID (PID)	PID Description
UCSC-PSU1-1050W	1050W AC power supply for C-Series servers

UCSC-PSU1-1600W	1600W power supply for C-Series servers
UCSC-PSU1-770W	770W power supply for C-Series Servers

**NOTE:** In a two power supply server, both power supplies must be identical.

## STEP 10 SELECT INPUT POWER CORD(S)

Using [Table 13](#), select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYMPWRCORD, no power cord is shipped with the server.

## STEP 11 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM

### Select a Tool-less Rail Kit

---

Select a tool-less rail kit from [Table 14](#).

Table 14 Tool-less Rail Kit Options

Product ID (PID)	PID Description
UCSC-RAILB-M4	Ball Bearing Rail Kit for C220 and C240M4/M5 Rack Servers
UCSC-RAIL-NONE	No rail kit option

### Select an Optional Reversible Cable Management Arm

---

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use [Table 15](#) to order a cable management arm.

Table 15 Cable Management Arm

Product ID (PID)	PID Description
UCSC-CMA-M4	Reversible CMA for tool-less C220/C240 M4/M5 ball bearing rail kit

For more information about the tool-less rail kit and cable management arm, see the *Cisco UCS C240 M5 Installation and Service Guide* at this URL:

[http://www.cisco.com/c/en/us/td/docs/unified\\_computing/ucs/c/hw/C240M4/install/C240M4.html](http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C240M4/install/C240M4.html)

**NOTE:** If you plan to rackmount your UCS C240 M5 server, you must order a tool-less rail kit. The same rail kits and CMA's are used for C240 M4 and C240 M5 servers.

---

## STEP 12 SELECT MANAGEMENT CONFIGURATION (OPTIONAL)

By default, the C240 M5 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated Management Controller (CIMC). The Cisco VIC card must be installed in a slot with NCSI support.

To change the default NIC mode to Dedicated, select the UCSC-DLOM-01 PID shown in [Table 16](#). In Dedicated NIC mode, the CIMC can be accessed only through the dedicated management port. See [Chassis Rear View, page 8](#) for the location of the management port.

To change the default NIC mode to Cisco Card Mode, select the UCSC-CCARD-01 PID shown in [Table 16](#). In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

For more details on all the NIC mode settings, see

[http://www.cisco.com/c/en/us/td/docs/unified\\_computing/ucs/c/sw/gui/config/guide/2-0/b\\_Cisco\\_UCS\\_C-series\\_GUI\\_Configuration\\_Guide\\_201.pdf](http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/sw/gui/config/guide/2-0/b_Cisco_UCS_C-series_GUI_Configuration_Guide_201.pdf)

UCSC-CCARD-01	Cisco Card Mode BIOS setting for C-Series Servers

## STEP 13 SELECT SERVER BOOT MODE (OPTIONAL)

By default, the C240 M5 server will ship with UEFI as the default boot mode. To have a server shipped with the Legacy BIOS mode (which was standard on M4 and previous generation servers), select the Legacy BIOS PID.

Table 17 Server Boot Mode Ordering Information

Product ID (PID)	PID Description
UCSC-LBIOS-01	Legacy Boot Mode BIOS setting for C-Series Servers

## STEP 14 SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from [Table 18](#).

Table 18 Locking Bezel Option

Product ID (PID)	Description
UCSC-BZL-C240M5	C240 M5 Security Bezel

## STEP 15 ORDER SECURITY DEVICES (OPTIONAL)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in [Table 19](#).

Table 19 Security Devices

Product ID (PID)	PID Description
UCSX-TPM2-001	Trusted Platform Module 1.2 SPI-based for UCS Servers
UCSX-TPM2-002	Trusted Platform Module 2.0 for UCS servers
UCSC-INT-SW01 <sup>1</sup>	C220 M5 and C240 M5 Chassis Intrusion Switch

**Notes:**

1. Available later in CY 2017.

**NOTE:** The TPM module used in this system conforms to TPM v1.2 and 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.

**NOTE:** NOTE: TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

## STEP 16 ORDER OPTICAL DRIVE (OPTIONAL)

Order an optical drive (DVD). See [Table 20](#).

Table 20 Optical (DVD) Drive

Product ID (PID)	PID Description
UCSC-DVD-C240M5	Media Drive (DVD) for C240 M5 Servers (8-HDD version only)

---

### Caveats

---

You can order a DVD drive only for the UCSC-C240-M5S (8-HDD backplane version of the server).

## STEP 17 ORDER CISCO SD CARD MODULE (OPTIONAL)

Order SD cards. See [Figure 6 on page 67](#) for the location of the SD cards. There are two locations, SD1 and SD2.

Table 21 128 GB Secure Digital (SD) Card (blank)

Product ID (PID)	PID Description
UCS-SD-128G	128 GB SD Card for UCS Servers
UCS-SD-64G-S	64 GB SD Card for UCS Servers
UCS-SD-32G-S	32 GB SD Card for UCS Servers

### Caveats

- Install either one or two SD cards
- Do not mix SD card sizes
- You cannot mix SD cards with an internal M.2 SATA SSD (see [ORDER M.2 SATA SSD \(OPTIONAL\), page 48](#)).

## STEP 18 ORDER M.2 SATA SSD (OPTIONAL)

Order one or two matching capacity M.2 SATA SSDs as desired.

Table 22 M.2 SATA SSDs

Product ID (PID)	PID Description
UCS-M2-240GB	240 GB M.2 SATA SSD
UCS-M2-960GB	960 GB M.2 SATA SSD

### Caveats

- Install either one or two M.2 SATA SSDs.
- You cannot mix M.2 SATA SSDs with SD cards (see [ORDER CISCO SD CARD MODULE \(OPTIONAL\), page 47](#)).
- When Ordering two M.2 devices with embedded software RAID with the UCSC-C240-M5S server PID, the maximum number of internal SATA drives supported is six. To support greater than 6 internal drives a Cisco 12G Raid Controller or 12G SAS HBA must be ordered

## STEP 19 ORDER INTERNAL MICRO-SD CARD MODULE (OPTIONAL)

Order a 32 GB micro-SD card.

The micro-SD card serves as a dedicated local resource for utilities such as HUU. Images can be pulled from a files hare (NFS/CIFS) and uploaded to the cards for future use.

Table 23 32 GB Secure Digital (SD) Card (blank)

Product ID (PID)	PID Description
UCS-MSD-32G	32GB Micro-SD Card for UCS servers

### Caveats

- The microSD card mounts internally on riser 1 or riser 1B, so you must order either UCSC-PCI-1-C240M5 or UCSC-PCI-1B-C240M5 when you order a micro-SD card.

## STEP 20 ORDER OPTIONAL USB 3.0 DRIVE

You can order one optional USB 3.0 drive. The USB drive ordering information is listed in [Table 24](#).

Table 24 USB 3.0 Drive

Product ID (PID)	PID Description
UCS-USBFLSHB-16GB	UCS Servers 16 GB Flash USB Drive

See [Figure 6 on page 67](#) for the location of the USB connector

## STEP 21 SELECT OPERATING SYSTEM AND VALUE-ADDED SOFTWARE

For more details on supported operating systems and software for this server, see the Hardware & Software Compatibility List (HCL).

**NOTE:** PIDs tagged with an asterisk (\*) are Resell of an OEM Vendor's Support. They are required to be added to the associated Product License PID.

## STEP 23 SELECT SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

### Unified Computing Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

### Smart Net Total Care (SNTC) for UCS

For support of the entire Unified Computing System, Cisco offers the Cisco Smart Net Total Care for UCS Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world

For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco Smart Net Total Care for UCS Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco's extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. For more information please refer to the following url: <http://www.cisco.com/c/en/us/services/technical/smart-net-total-care.html?stickynav=1>

#### Smart Net Total Care for Cisco UCS Onsite Troubleshooting Service

An enhanced offer over traditional Smart Net Total Care which provides onsite-troubleshooting expertise to aid in the diagnostics and isolation of hardware issue within our customers' Cisco Unified Computing System (UCS) environment. It is delivered by a Cisco Certified field engineer (FE) in collaboration with remote TAC engineer and Virtual Internet working Support Engineer (VISE). ### Solution Support for UCS

Solution Support includes both Cisco product support and solution-level support, resolving complex issues in multivendor environments, on average, 43% more quickly than product support alone. Solution Support is a critical element in data center administration, to help rapidly resolve any issue encountered, while maintaining performance, reliability, and return on investment.

This service centralizes support across your multivendor Cisco environment for both our products and solution partner products you've deployed in your ecosystem. Whether there is an issue with a Cisco or solution partner product, just call us. Our experts are the primary point of contact and own the case from first call to resolution. For more information please refer to the following url:

### Smart Net Total Care for UCS Hardware Only Service

For faster parts replacement than is provided with the standard Cisco Unified Computing System warranty, Cisco offers the Cisco Smart Net Total Care for UCS Hardware Only Service. You can choose from two levels of advanced onsite parts replacement coverage in as little as four hours. Smart Net Total Care for UCS Hardware Only Service provides remote access any time to Cisco

support professionals who can determine if a return materials authorization (RMA) is required. You can choose a desired service listed in [Table 30](#)

#### Partner Support Service for UCS

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

PSS options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

PSS is available to all Cisco PSS partners.

The two Partner Unified Computing Support Options include:

- Partner Support Service for UCS
- Partner Support Service for UCS Hardware Only

PSS for UCS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support. You can choose a desired service listed in [Table 31](#).

### Unified Computing Combined Support Service

Combined Services makes it easier to purchase and manage required services under one contract. SNTC services for UCS help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco Unified Computing System (Cisco UCS), the more important the technology becomes to your business. These services allow you to:

- Optimize the uptime, performance, and efficiency of your UCS
- Protect your vital business applications by rapidly identifying and addressing issues
- Strengthen in-house expertise through knowledge transfer and mentoring
- Improve operational efficiency by allowing UCS experts to augment your internal staff resources

- Enhance business agility by diagnosing potential issues before they affect your operations, You can choose a desired service listed in [Table 33](#)

#### UCS Drive Retention Service

With the Cisco Unified Computing Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available)

**NOTE:** Cisco does not offer a certified drive destruction service as part of this service.

#### Local Language Technical Support for UCS

Where available, and subject to an additional fee, local language support for calls on all assigned severity levels may be available for specific product(s) - see tables above.

For a complete listing of available services for Cisco Unified Computing System, see the following [http://www.cisco.com/en/US/products/ps10312/serv\\_group\\_home.html](http://www.cisco.com/en/US/products/ps10312/serv_group_home.html)

## OPTIONAL STEP - ORDER RACK(s)

The optional R42612 rack is available from Cisco for the C-Series servers, including the C240 M5 SFF server. This rack is a standard 19-inch rack and can be ordered with a variety of options, as listed in [Table 34](#). Racks are shipped separately from the C240 M5 SFF server.

Table 34 Racks and Rack Options

Product ID (PID)	PID Description
RACK2-UCS	<p>Cisco R42612 expansion rack, no side panels.</p> <p>This type of rack is used for multiple-rack deployments.</p>
RACK2-UCS2	<p>Cisco R42612 static (standard) rack, with side panels.</p> <p>This type of rack is used for single-rack and end of row deployments. Side panels are needed for racks at the ends of multiple-rack deployments. For example, when configuring a row of 5 racks, order 1 standard rack plus 4 expansion racks. Apply the side panels from the standard rack to the racks at each end of the row.</p>
RACK-BLANK-001	<p>Blanking panels (qty 12), 1U, plastic, toolless.</p> <p>Recommended to ensure proper airflow. Fill all empty RU spaces in the front of the rack. Because each blanking panel PID includes 12 panels, use the following calculation: <math>42RU - \text{occupied RU} = \text{available RU}</math>. Divide available RU by 12 to determine PID order quantity.</p>
RACK-CBLMGT-001	<p>Cable mgt D rings (qty 10), metal.</p> <p>Use the D rings to bundle system cables to ensure proper airflow.</p>
RACK-CBLMGT-003	<p>Brush strip (qty 1), 1 U.</p> <p>The brush strip promotes proper airflow while allowing cables to be passed from the front to the rear of the rack.</p>
RACK-CBLMGT-011	<p>Cable mgt straps (qty 10), Velcro.</p> <p>Use the Velcro straps to bundle system cables to ensure proper airflow.</p>
RACK-FASTEN-001	<p>Mounting screws (qty 100), M6.</p> <p>The rack ships with nuts and screws, but extras may be ordered.</p>
RACK-FASTEN-002	<p>Cage nuts (qty 50), M6.</p> <p>The rack ships with nuts and screws, but extras may be ordered.</p>
RACK2-JOIN-001	<p>Rack joining kit.</p> <p>Use the kit to connect adjacent racks within a row. Order 1 unit less than the number of racks in the row.</p>
RACK2-GRND-001	Cisco R42612 grounding kit

For more information about the R42612 rack, see [RACKS](#), page 81.

## OPTIONAL STEP - ORDER PDU

An optional power distribution unit (PDU) is available from Cisco for the C-Series rack servers. This PDU is available in a zero rack unit (RU) style or horizontal PDU style see Cisco RP-Series Rack and Rack PDU specification for more details at:

<http://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/r-series-racks/rack-pdu-specsheet.pdf>

## RAID Option ROM (OPROM) Settings

The server contains an Option ROM (OPROM) for the PCIe slots. The server has a finite amount of option ROM with which it can boot up devices. Go into the BIOS and disable the OPROM on the PCIe slots not used for booting so that resources are available for the slots that are used for booting. An example OPROM BIOS screen is shown in *Figure 8*.

To Create a RAID Group

(1) While the server is booting, wait for the prompt and press function key F2 as shown in [Figure 10](#).

Figure 10 Function Key F2 Prompt

In a few seconds, you will see the screen that allows you to set up a RAID group for the primary SATA controller (see [Figure 11](#)).

Figure 11 Screen to Configure Primary SATA RAID Group

(2) Press Ctrl+M to start the RAID group creation process for the primary SATA controller (for drives 1-4, as shown in [Figure 10 on page 76](#)). Or, do nothing and wait for the next screen, which allows you to create a RAID group for the secondary SATA (sSATA) controller see [Figure 12](#).

**Notes:**

1. A drive blanking panel must be installed if you remove a disk drive from a UCS server. These panels are required to maintain system temperatures at safe operating levels, and to keep dust away from system components.

## RACKS

The Cisco R42612 rack is certified for Cisco UCS installation at customer sites and is suitable for the following equipment:

- Cisco UCS B-Series servers and fabric interconnects
- Cisco UCS C-Series and select Nexus switches

The rack is compatible with hardware designed for EIA-standard 19-inch racks. see Cisco RP-Series Rack and Rack PDU specification for more details at

<http://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/r-series-racks/rack-pdu-specsheet.pdf>

## PDU

Cisco RP Series Power Distribution Units (PDUs) offer power distribution with branch circuit protection.

Cisco RP Series PDU models distribute power to up to 42 outlets. The architecture organizes power distribution, simplifies cable management, and enables you to move, add, and change rack equipment without an electrician.

With a Cisco RP Series PDU in the rack, you can replace up to two dozen input power cords with just one. The fixed input cord connects to the power source from overhead or under-floor distribution. Your IT equipment is then powered by PDU outlets in the rack using short, easy-to-manage power cords.

The C-series servers accept the zero-rack-unit (ORU) or horizontal PDU. see Cisco RP-Series Rack and Rack PDU specification for more details at

<http://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/r-series-racks/rack-pdu-specsheet.pdf>

## KVM CABLE

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB 2.0 ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The KVM cable ordering information is listed in [Table 38](#).

## Power Specifications

The server is available with the following types of power supplies:

- 1050 W (AC) power supply (see [Table 40](#)).
- 1050 W V2 (DC) power supply (see [Table 41](#))
- 1600 W (AC) power supply (see [Table 42](#))

## Environmental Specifications

The environmental specifications for the C220 M5 server are listed in [Table 43](#).

Table 43 UCS C240 M5 SFF Environmental Specifications

Parameter	Minimum
Operating Temperature	10°C to 35°C (50°F to 95°F) with no direct sunlight Maximum allowable operating temperature de-rated 1°C/300 m (1°F/547 ft) above 950 m (3117 ft)
Extended Operating Temperature	5°C to 40°C (41°F to 104°F) with no direct sunlight Maximum allowable operating temperature de-rated 1°C/175 m (1°F/319 ft) above 950 m (3117 ft) 5°C to 45°C (41°F to 113°F) with no direct sunlight Maximum allowable operating temperature de-rated 1°C/125 m (1°F/228 ft) above 950 m (3117 ft) System performance may be impacted when operating in the extended operating temperature range. Operation above 40C is limited to less than 1% of annual operating hours. Hardware configuration limits apply to extended operating temperature range.
Non-Operating Temperature	-40°C to 65°C (-40°F to 149°F) Maximum rate of change (operating and non-operating) 20°C/hr (36°F/hr)
Operating Relative Humidity	8% to 90% and 24°C (75°F) maximum dew-point temperature, non-condensing environment
Non-Operating Relative Humidity	5% to 95% and 33°C (91°F) maximum dew-point temperature, non-condensing environment
Operating Altitude	0 m to 3050 m {10,000 ft)
Non-Operating Altitude	0 m to 12,000 m (39,370 ft)
Sound Power level, Measure A-weighted per ISO7779 LWAd (Bels) Operation at 73°F (23°C)	5.8
